DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, drawn to a liner system of a cyclone, classified in class 209, subclass 717.
- II. Claims 10-17 and 35-42, drawn to a mechanism for removing abrasive resistant cones, classified in class 209, subclass 715.
- III. Claims 18-34, drawn to a cyclone, classified in class 209, subclass 725.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as a liner in a cyclone that is permanently placed within the cyclone and is not removable or replaceable. See MPEP § 806.05(d).

Inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as

claimed because the cyclone would operate just as well with a permanent, and not a replaceable, liner system. The subcombination has separate utility such as a liner for other material classifying devices, including unidirectional hydrocyclones, vorticals, and whirlpools.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
